

## **Customer Changes in *HBLT* application from version 2.00 to version 2.01**

Author: Charles E. Southward  
Date: April 12, 2004

This version makes the following changes:

1. Added the HBLT application version and the kernel version to the top of the test results printed report.
2. Added the new configuration option that prints the test settings before the test results on the test results printed report. The default is to not print the test settings. Do not enable this option when using Pressure Manager. Pressure Manager already includes the test settings in it's report.
